Build the top of the head
before gluing the ears.

Use a pencil to give the pieces a rounder shape, this will make the model have a more natural look.

Glue the teeth only after the head. To glue the shell teeth imagine a clock, with the head facing you. Glue the pieces representing 12, 3, 6 and 9. After that, glue the pieces in between. This will give you a North and a better result.

I suggest filling the tail (52-53) with something heavy (I used rice) to give it some weight and make it easier to stand on the base.

56

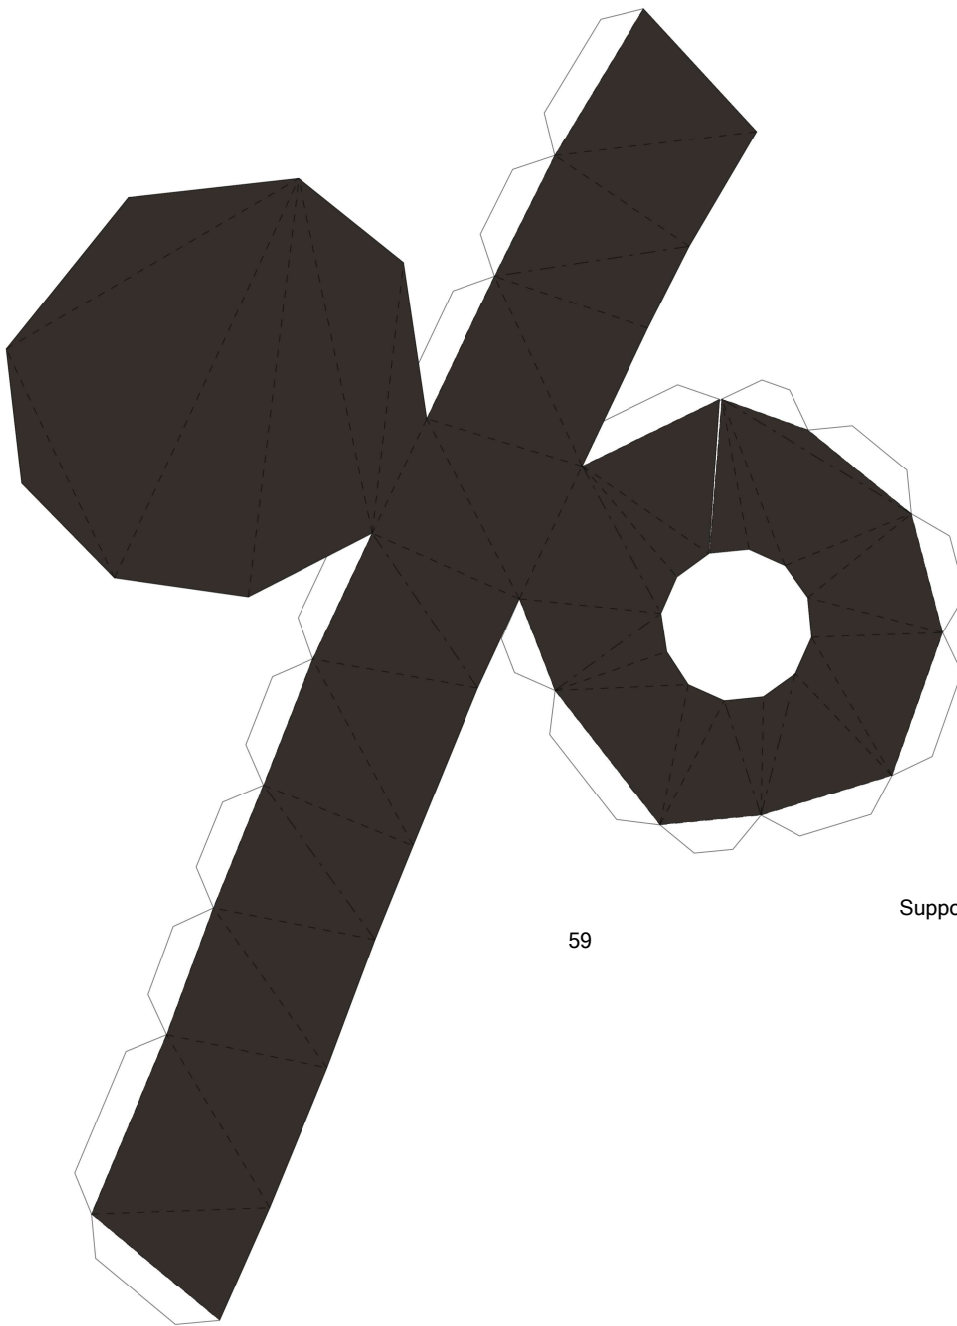

55

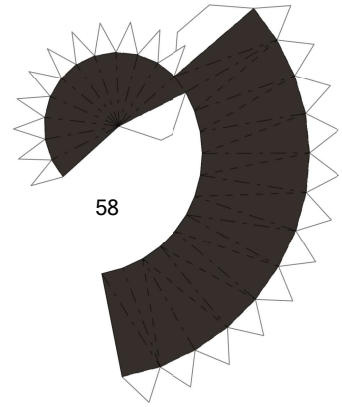

54

There are some lines to be folded on the base to give it a natural look.
Refer to the pdo or the Edge ID pdf.

59

58

Support to reinforce the base.
