INSTRUCTIONS

Put glue at the back of the striped zones.

Here's the order you should take to build the model:

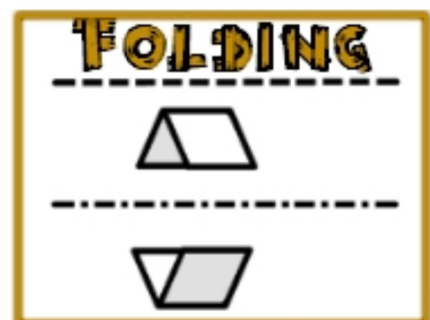

1-The body: Glue the front and the back together, glue the top, then the bottom, the tail and finally the bottom tail;

2-The back wings: Simply glue the two sides of the back wings together, then glue it to the back of the body;

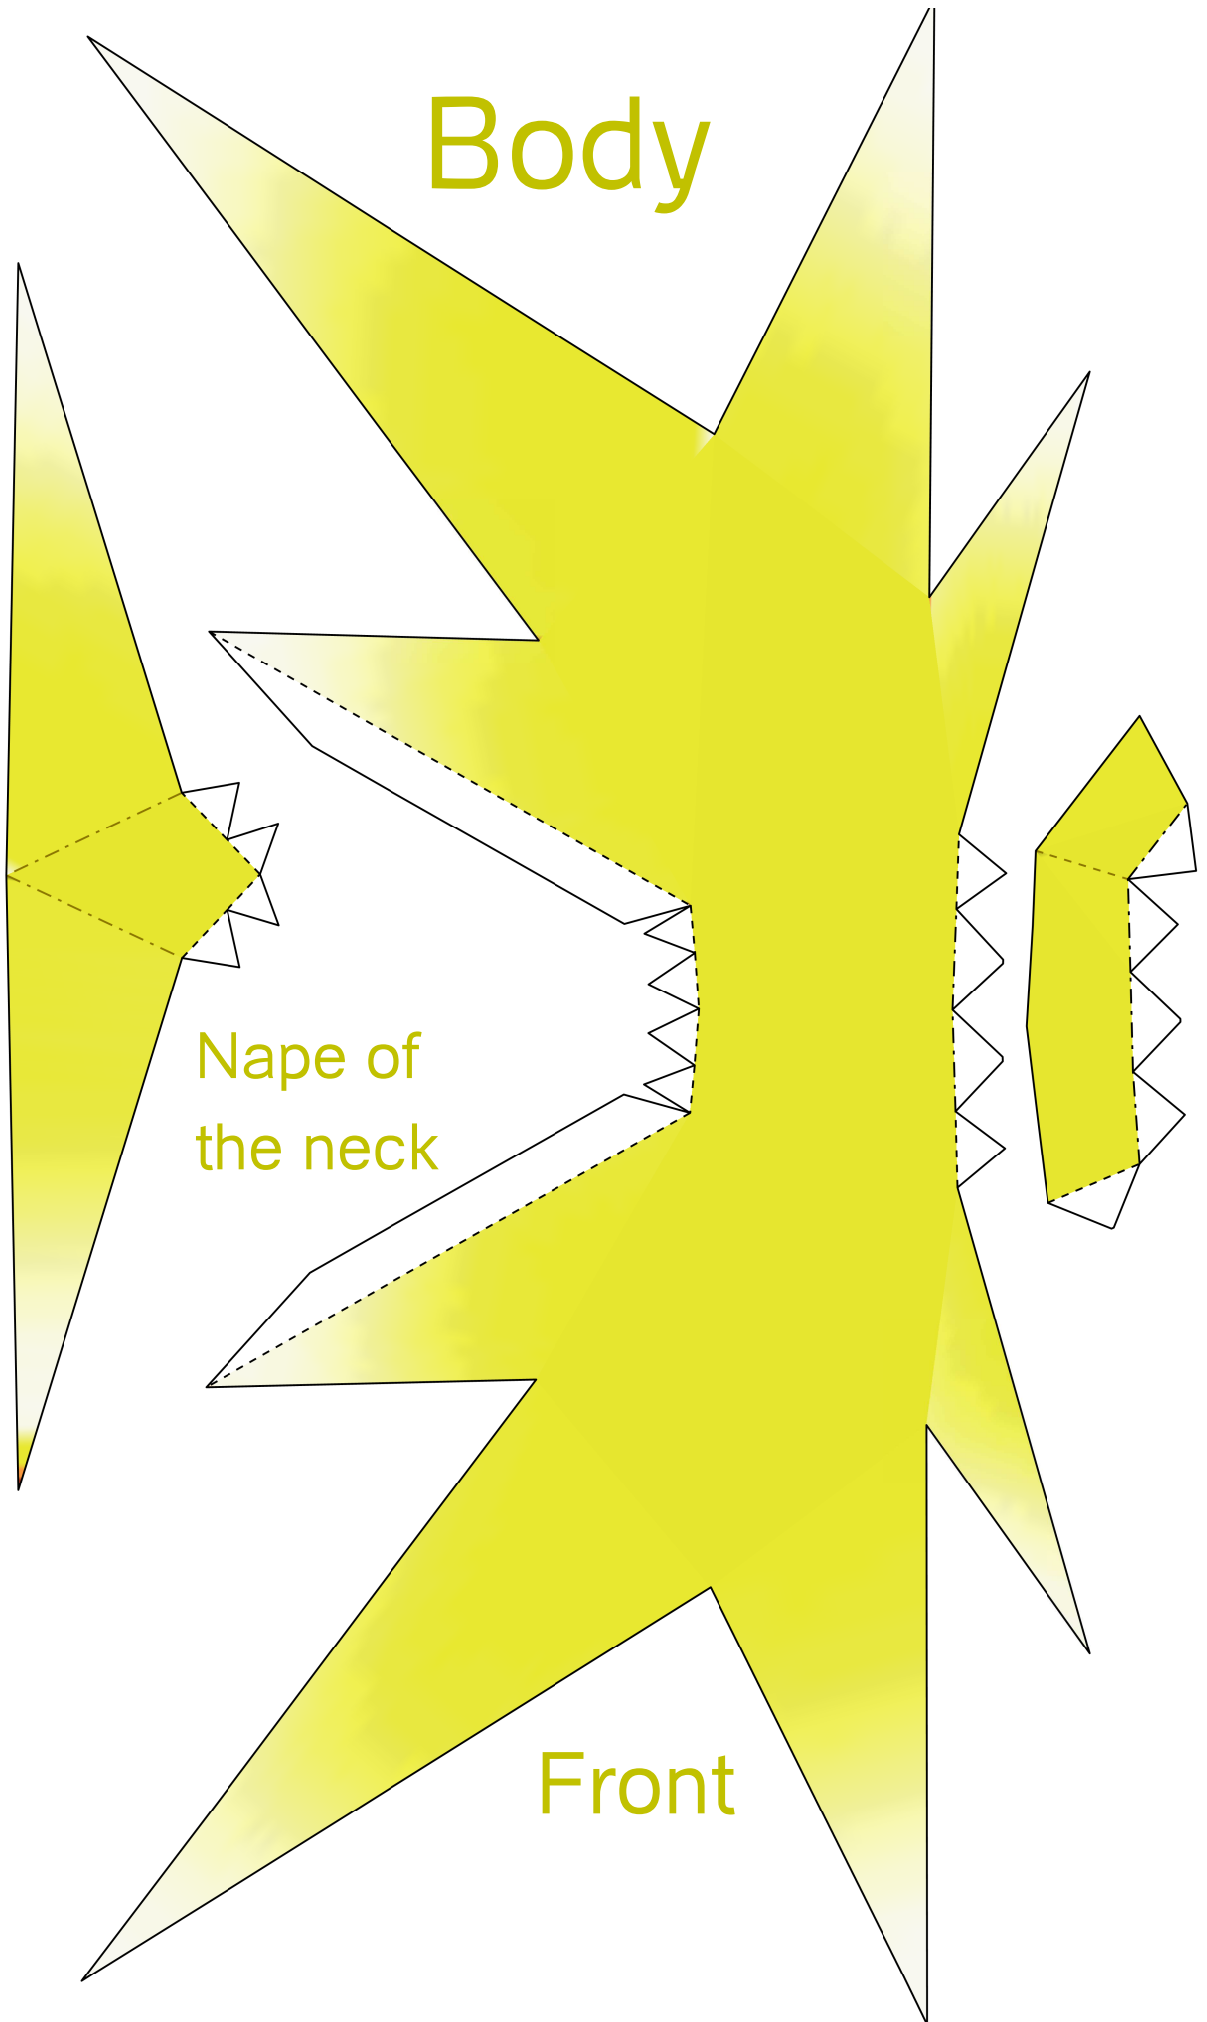

3-The head: Glue the three head pieces together, then glue the beak on the lower piece of the face. After, glue this on the top of the body.

4-The legs: Build the Grey pieces. Then, glue together the legs pieces and the feet. (Where you close the legs are closed openings. They need to point the alone toe of the feet). The glue the legs and the grey pieces together.

Enjoy!

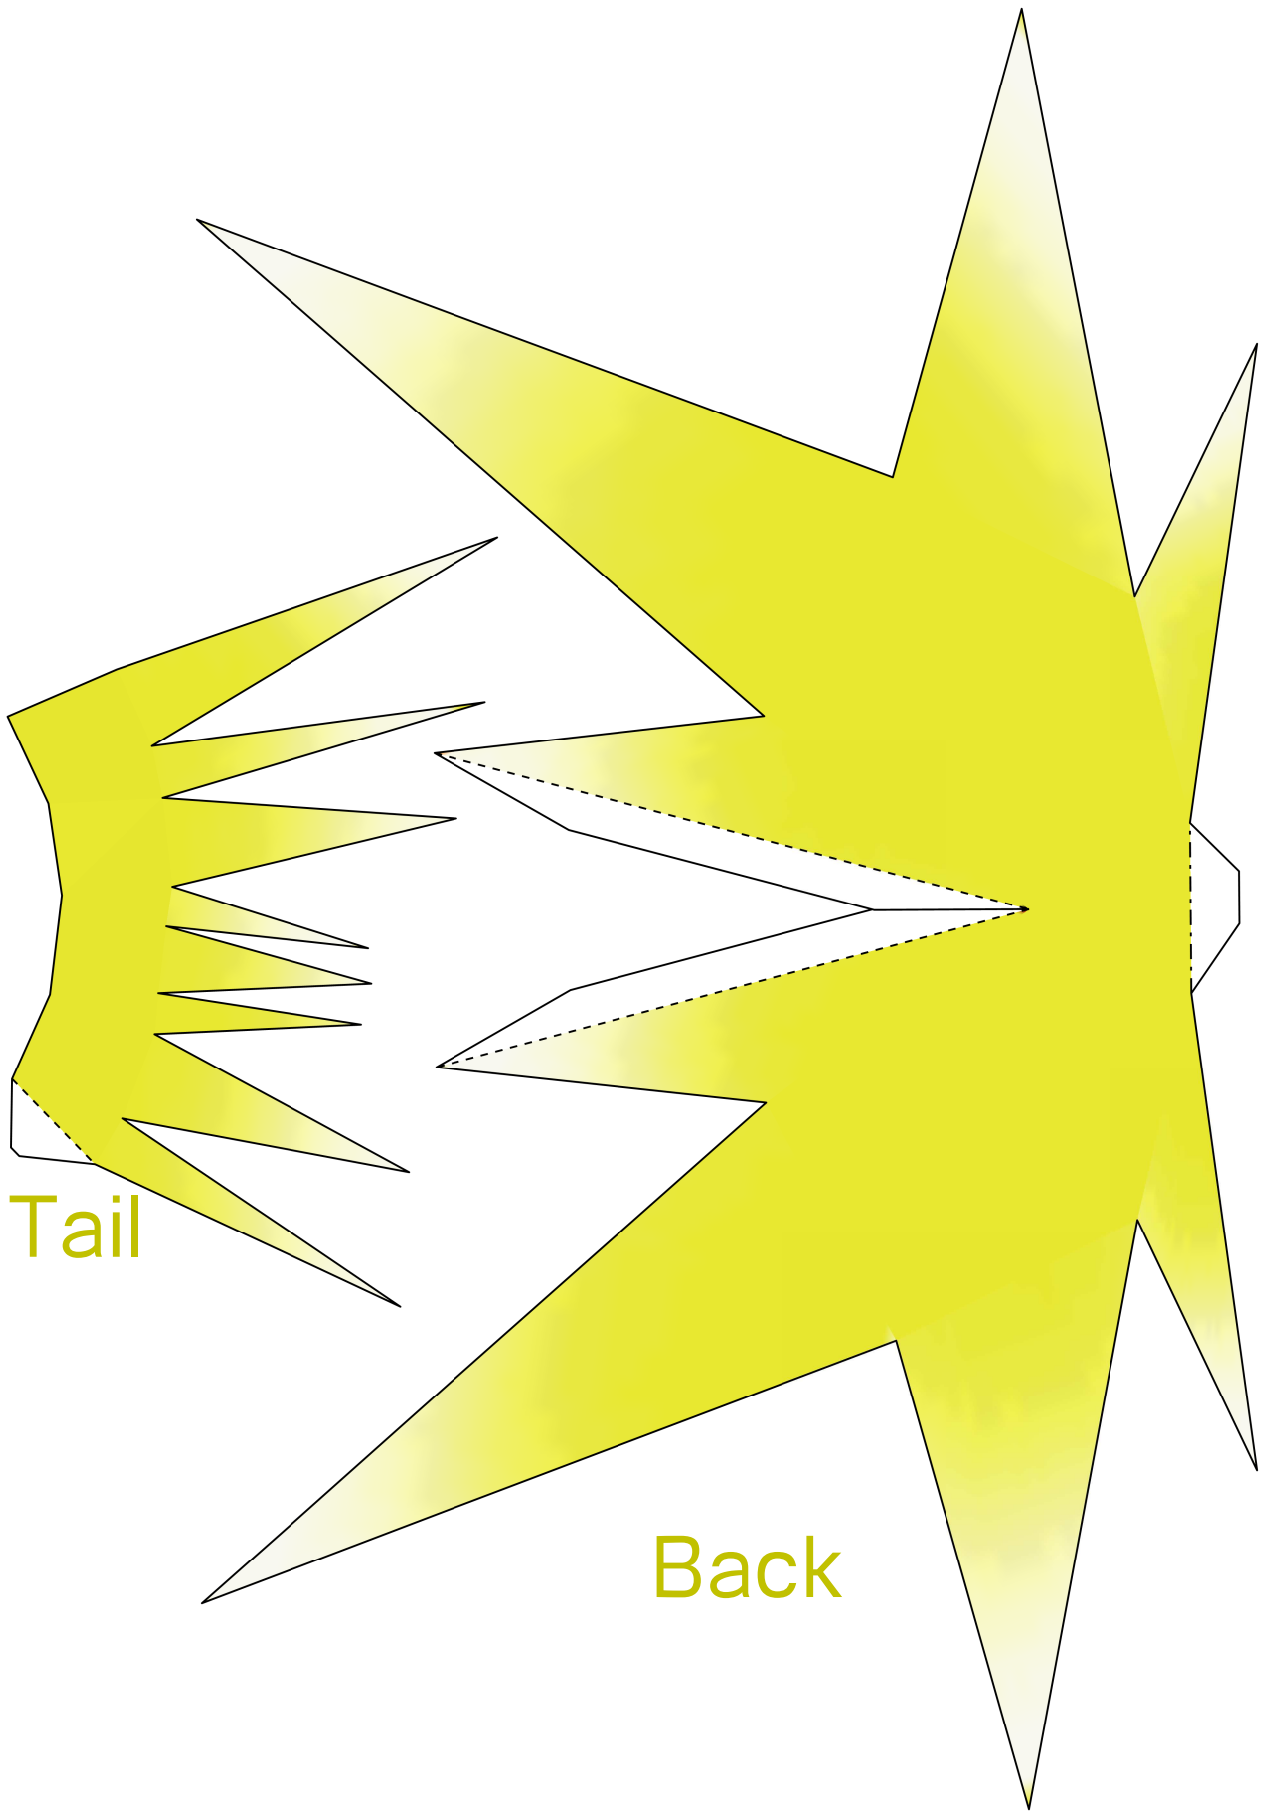

Body

Nape of
the neck

Front

Tail

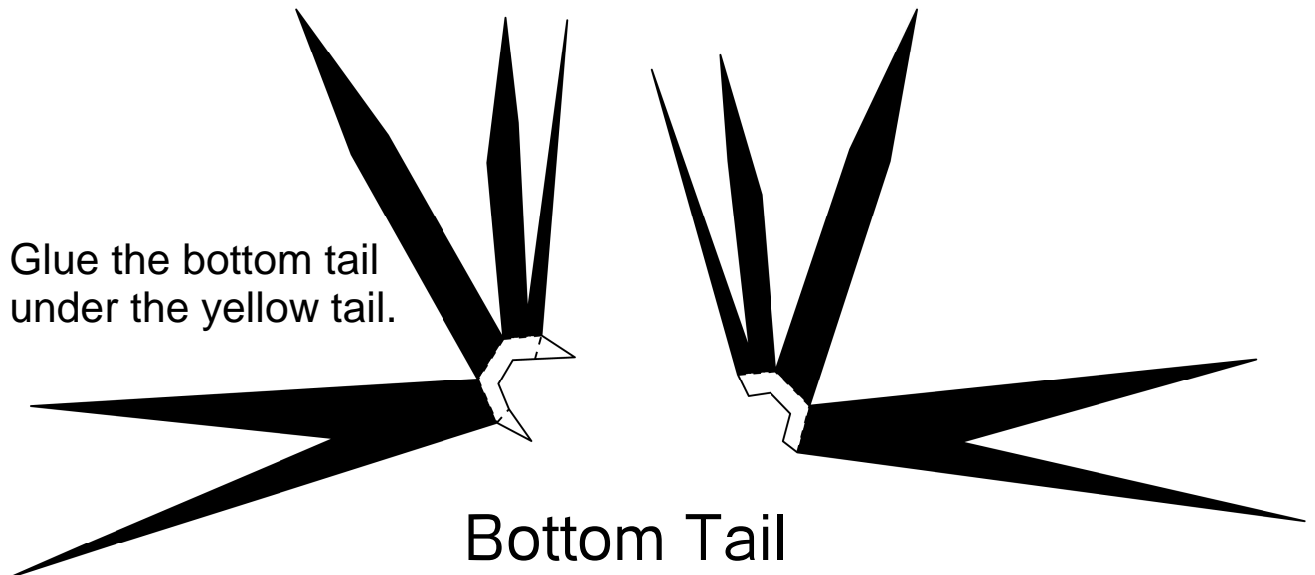

Back

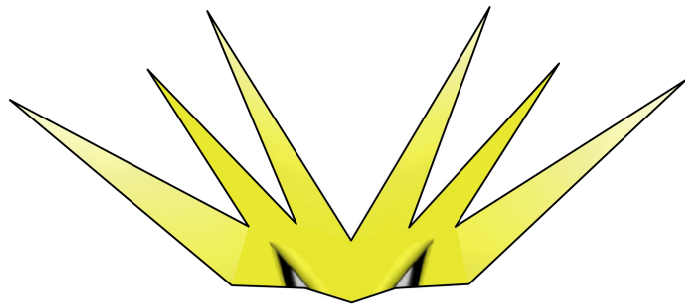

Back wings

This is the side you should see from behind the model.

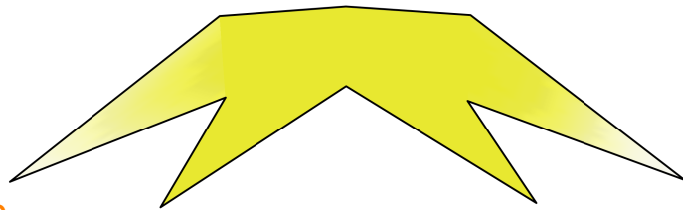

Glue the bottom tail under the yellow tail.

Bottom Tail

Head

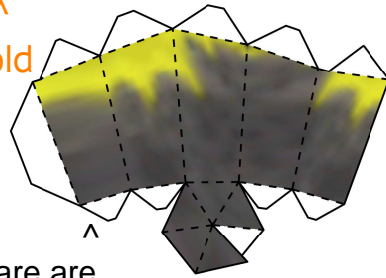

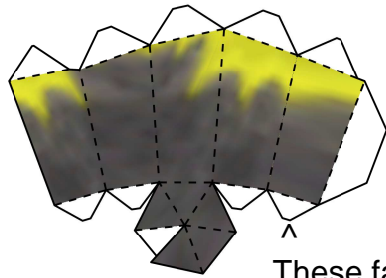

Beack
